DECLARATION

I declare that this is my own work, and this dissertation does not incorporate without acknowledgement any material previously submitted for a degree or Diploma in any other University or institute of higher learning, and to the best of my knowledge and belief, it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to the Sri Lanka Institute of Information Technology the nonexclusive right to reproduce and distribute my dissertation, in whole or in part in print, electronic, or another medium. I retain the right to use this content in whole or part in future works (such as articles or books).

triggering alarms upon animal detection to discourage them from the fields has shown promise in pilot studies (Chen et al., 2022).

However, the literature also highlights certain limitations in existing automated crop security systems. Issues related to accuracy in animal identification, false positives, and the adaptability of these systems to diverse environmental conditions have been cited as challenges that need to be addressed for practical implementation (Brown & Smith, 2020).

From all individual components, resarch papers should be published before the PP2
13:58

Guys, search the upcoming conferences now. We must hurry in publications. First check the Sri Lankan university conferences.
